

JESUS Film Equipment

JESUS Film Harvest Partners (JFHP) teams bring JESUS to people in one-on-one, small group, and large group settings. JFHP strives to support whatever size the audience is with cutting-edge equipment that meets all kinds of needs.

How Equipment is Used by Teams

Why Equipment is Vital

JESUS Film equipment is vital to a team's ministry by providing them with tools to reach groups of people in a variety of settings ranging from urban parks and backyards to villages located deep in the wilderness. With it they can truly minister in the hardest-to-reach areas!

If Interested

To support a JESUS Film team by providing needed equipment, please go to the following:

Solar Powered Backpack www.JFHP.org/backpack

Mini Solar Set www.JFHP.org/mss

- Microphones
- Sound System
- Rechargeable Batteries
- Screen and Frame
- Solar Panel
- Cables and Adapters
- Evangelism Soccer Ball
- Bible Story Cloth
- EvangeCube™
- And More...

Solar Powered Backpack Set

The JESUS Film Solar Powered Backpack Set gives JESUS Film Team leaders the necessary tools to reach groups of up to 1,000 people in a variety of settings.

What are some of the components?

Screen:

The oval screen is designed for ease of assembly, portability, and light weight durability. It can be hung from a tree, leaned against a wall, or suspended in an alley. The elastic, spandex material is washable and durable (think football uniforms). Additionally, the JESUS Film can be seen on both sides of the screen.

Speakers:

The backpack includes two public address horn speakers. These allow over 1,000 people to hear. They are built to withstand varied weather conditions and are easy to hang from a nearby building or tree.

Projector:

This LED projector is the size of your hand. It is light weight and plays the film directly from a micro SD card. This eliminates problems associated with scratched DVDs, and no replacement bulbs are needed.

Power System:

Think of it as a personal power plant. The power system in the backpack consists of a battery that lasts 6-8 hours allowing showings of the film in the most remote areas. It can also be recharged through the conventional power grid, solar energy, or even a car battery.

Why the Solar Powered Backpack Set?

+ Durable

The system is designed for the outdoors—resistant to moisture and dirt— giving longevity. This allows more people over time to hear about God's love.

+ Efficient

With 6-8 hours of battery life, teams can show the film multiple times before having to recharge. The compact size allows teams to move more quickly from location to location.

+ Effective

Up to 1,000 people can hear and potentially respond to the gospel.

Specs:

= 1,000
People can watch
JESUS Film

= 1 day
Solar panel to
charge battery

= 6-8 hrs.
Powers movie plus
talk time

Lbs. = 46.5 lbs.
Entire package

To provide a Solar Powered Backpack Set, go to www.JFHP.org/backpack or call 913-663-5700.

To provide & hand-deliver a backpack to a JESUS Film team, call 913-663-5700 and ask about the different type of trip opportunities available.

Mini Solar Set

The Mini Solar Set is the ideal tool for JESUS Film teams to show JESUS to groups of up to 200 people even in the most remote areas of the world or most populous urban centers.

What are some of the components?

Screen:

The Mini Solar Set has the option of coming either with a 70" rectangular screen or a 90" oval screen. Both are designed for ease of assembly, portability, and light weight durability. The elastic, spandex material is washable and durable (think football uniforms). Additionally, the JESUS Film can be seen on both sides of the screen.

Speakers:

This set of stackable cube speakers is designed to be audible by up to 200 people. They have a built-in amplifier and are less than 6" tall.

Projector:

This LED projector is the size of your hand. It is light weight and plays the film directly from a micro SD card. This eliminates problems associated with scratched DVDs, and no replacement bulbs are needed.

Power System:

Think of it as a personal power plant. The power system in the Mini Solar Set consists of a battery that lasts for over 3 hours of playback time. It can also be recharged through the conventional power grid, solar energy, or even a car battery.

Why the Solar-Mini Set?

+ Versatile

With an included solar panel, the team can minister in remote areas longer.

+ Flexible

The smaller size allows for indoor showings in homes, apartments, and community centers for urban outreach.

+ Effective

Up to 200 people can hear and potentially respond to the gospel.

Specs:

= 200

People can watch JESUS Film

= 1 day

Solar panel to charge battery

= 3+ hrs.

Over 3 hours of battery-powered playback

Lbs. = 17 lbs.
