

LIGHTSTREAM
POCKET

The Lightstream Pocket

Power on the [LightStream Pocket](#) and any nearby cell phone can connect to the WiFi hotspot and browse through the “netflix-like” user interface to select and download or stream the Christian media stored on the device. Put a microSD card in the microSD slot, and the LightStream Pocket will quickly copy the media over to the card and optionally lock it if you don’t want the media to ever be removed or deleted. Finally, the LightStream Pocket scans for bluetooth-enabled devices and automatically “pushes” the Christian media files to them. These 3 distribution methods make the LightStream an ideal solution to quickly and efficiently get Bibles and other Christian media to the people you’re trying to reach.
